

Make English the reading path.

让英文成为主阅读路径，中文保留为即时理解与校准层。

A four-page design demo based on the July 20 Second Edition.

基于 7 月 20 日第二版日报制作的四页视觉测试。

TEST GOAL / 测试目标

English is darker, larger, and typographically stronger. Chinese remains fully present, but becomes a compact support layer instead of competing equally for attention.

Which language does your eye read first?

你的注意力会先落在哪一种语言上？

Previous hierarchy / 原来的层级

AI ROI 不应再只看席位与 Token

AI ROI should not be measured by seats and tokens alone.

模型是否减少返工、缩短准备时间，并稳定产出可直接使用的结果，才是真正价值。

The real value is whether the model reduces rework, shortens preparation time, and reliably produces usable results.

视觉结果：大多数中文读者会自然跳过浅灰英文，把它当成“附带翻译”。

English-first hierarchy / 英文优先层级

AI ROI should not be measured by seats and tokens alone.

AI ROI 不应再只看席位与 Token。

The real value is whether the model reduces rework, shortens preparation time, and reliably produces usable results.

真正价值在于模型能否减少返工、缩短准备时间，并稳定产出可直接使用的结果。

视觉结果：英文成为主句；中文仍能立刻校准理解，但不会抢走第一眼注意力。

OpenAI proposes “Useful Intelligence per Dollar” as a better measure of AI ROI

OpenAI 提出“每美元有效智能”：AI ROI 不应再只看席位与 Token

10-SECOND TAKEAWAY / 10秒看懂

AI value should be measured by useful work completed, cost per successful task, and dependability—not seats or token prices alone.

AI 的价值应按完成了多少可用工作、每个成功任务花多少钱，以及结果是否可靠来衡量，而不是只看用户数或单个 Token 价格。

WHY WILL SHOULD CARE / 为什么与你有关

This is the right framework for evaluating Codex, enterprise copilots, or a future EP training assistant: not by raw model strength, but by reduced rework, faster preparation, and dependable usable output.

这套框架适合评估 Codex、企业 Copilot 或未来的 EP 培训助手：重点不是模型参数多强，而是能否减少返工、缩短准备时间，并稳定产出可直接使用的结果。

WHAT HAPPENED / 发生了什么

OpenAI published an enterprise scorecard built around four questions: how much meaningful work AI completes, the total cost of a successful task, how dependable the result is, and whether each dollar creates more value at scale.

OpenAI 发布了一份企业 AI 价值计分卡，围绕四个问题：AI 完成多少有意义的工作；成功完成一次任务的总成本；结果是否可靠；以及规模扩大后，每一美元能否创造更多价值。

WHY IT MATTERS / 为什么重要

Cheaper tokens do not necessarily mean cheaper outcomes. A low-cost model may require more retries, more human review, or more time, raising the real cost of a completed task.

低 Token 单价并不一定意味着低任务成本。便宜模型可能需要更多重试、更多人工复核或更长处理时间，从而提高完成一次任务的真实成本。

Class I recall expands for Medline reprocessed EP and ICE catheters over residual-particle risk

Medline 再处理 EP 与 ICE 导管 Class I 召回扩大：残留颗粒是核心风险

KEY TERM / 关键术语

Reprocessed single-use device

再处理单次使用器械

WHAT IT IS / 它是什么

A device originally labeled for single use that is cleaned, tested, and remanufactured for another use under a regulated process.

原本标为单次使用的器械，经合规清洗、检测和再制造后再次销售使用。

WHAT IT MEANS HERE / 本文语境

The recall concerns third-party reprocessed versions, not every original device carrying the same product-family name.

本次召回涉及第三方再处理版本，而不是所有同名原厂产品。

DO NOT CONFUSE IT WITH / 不要混淆

Do not confuse regulated commercial reprocessing with informal in-hospital reuse.

不要把合规商业再处理与医院现场简单清洗后重复使用混为一谈。

SIGNAL VS. NOISE / 信号还是噪音

Very high signal and directly relevant to EP operations. FDA classifies the recall as the most serious category, and the action remains open.

极高信号，且对 EP 现场高度相关。FDA 将其列为最严重类别，召回状态仍开放。

EDITORIAL SIGNAL SCORE • 96 / 100

NEXT TRIGGER / 下一观察节点

Check whether accounts use Medline ReNewal products, affected item and lot numbers, quarantine instructions, and any sourcing shift to original manufacturers or other reprocessors.

检查账户是否使用 Medline ReNewal 产品、受影响 item 与 lot、隔离要求，以及采购是否转向原厂或其他再处理商。

ASK NEXT / 可以继续追问

How can the lab quickly distinguish original and reprocessed catheters?

如何快速区分原厂导管和再处理版本？

How should a Class I recall be communicated in the field?

Class I recall 在现场沟通中应该怎么表述？
